Install Darwin Streaming Server 6.0.3 on Ubuntu 14.04

The process of build Darwin Streaming Server 6.0.3 on Ubuntu 14.04:

1. ref to [Configuring Darwing Streaming Server in Linux](#)
 - download & apply patches
2. refer to [here](#) to modify make file, add -lpthread to follow make file:
 - ./QTFileTools/QTFileTest.tproj/Makefile.POSIX -lpthread
 - ./QTFileTools/QTTrackInfo.tproj/Makefile.POSIX -lpthread
 - ./QTFileTools/QTSampleLister.tproj/Makefile.POSIX -lpthread
 - ./QTFileTools/QTTrackInfo.tproj/Makefile.POSIX -lpthread
 - refer to:
http://blog.csdn.net/zhaozhencn/article/details/18265535,
add -lpthread -ldl
3. Start DarwingStreaming Server and admin Server
 - .sudo /usr/local/sbin/DarwinStreamingServer
 - .sudo /usr/local/sbin/streamingadminserver.pl
4. Fix issues in Install script, as install.sh, visit [my github](#)
5. To test RTSP Client, run VLC:
rtsp://127.0.0.1/sample_100kbit.mp4
6. To test Web Admin,
 1. run: streamingadminserver.pl
 2. start browser, http://localhost:1220
7. Issue:
 - After installation, text in the "web admin server" is not able to display correctly. further investigation is needed.

Thanks to your instructions, I successfully installed the Darwin Streaming Server on UBUNTU 14.04.

Only Problem is, that I have no text or messages on the admin web interface.

Maybe this has something to do with the perl script which generates the web sites?

I have the same issue. No text on the web interface. I believe it is a localisation issue, but I do not know how to resolve it.
